AmperSpace

Grid connection: step by step.

A checklist for your first discussion with AmperSpace.

- [ ] **01 / Location and project**

  Prepare the plot number or address, building use and planned work stages. Check who may act for the investor.

- [ ] **02 / Equipment and demand**

  List planned equipment, ratings, simultaneous use and expected start dates. Include both temporary and permanent needs.

- [ ] **03 / Current operator documents**

  Gather the application, conditions, agreement and correspondence, if available. If none exist, tell us - we can start by agreeing the first steps.

- [ ] **04 / Site and installation scope**

  Provide available drawings, route information and access constraints. Agree which tasks belong to the operator, installer and investor.

- [ ] **05 / Costs and programme**

  Distinguish operator fees from installation costs. Coordinate paperwork, site work and power needs; confirm the operator's dates for the actual case.

- [ ] **06 / Commissioning and documentation**

  Agree the required tests, documents and signatures. The operator carries out network-side actions under its own procedures.

Start with a location and a short description. Miłosz Haber: +48 501 387 015.
